

AD Box S2 Phono

„Value blast!“

**stereoplay
Highlight**

A "modern" device that not only straightens and amplifies phono signals in a small space and for a small amount of money, but also converts them digitally and outputs them to a computer via USB.

It enables wear-free copies of the beloved originals. Maybe it could be more important for buyers, that they can hear their records after conversion on the go.

Value blast! The Pro-Ject AD Box S2 Phono is playful, dynamically difficult to get out of the way and does not allow mistakes. The level-controllable A/D converter is practical and digitized via line-in other sources.
