

## Phono Box DS2

**"Solid build, flexible configuration, first-class sound..."**

"The Phono Box DS2 pairs a decent amount of grunt with fine detail. The buttons situated on the front panel offer a configurable amplification of 50dB which harmonized well with the tested system. The Phono Box DS separated the midrange well and handled sudden musical attacks far better. Because of its design layout, the DS2 had the upper hand in dynamic range. Especially the benefit of the 50dB amplification made badly compressed music much more enjoyable. We highly recommend the Phono Box DS2."
