

# Debut PRO

"Best turntable 2022"

- Created in order to celebrate the 30th anniversary of the **undisputed turntable's worldwide leader**, this vinyl player shines.
- There are in the Debut PRO a lot of technical particularities that deserve to be mentioned, being the first of them **a one piece 8'6" tonearm** made of **a extremely stiff and carefully damped sandwich structure of aluminum and carbon fiber**.
- **The platter** itself is made in **cast aluminum** and has a **TPE (thermoplastic elastomer) ring** in its inner side in order to damp potential resonances and to minimize both wow and flutter.
