

Tube Box S2

„Value blast!“

stereoplay
Highlight

A phono pre-amplifier that uses classic signal processing tubes and handles the phono signals as analogue as possible.

With the Tube Box S2 you can change the tubes for the first time and thus influence the sound character of the small box. The experimentalists will be happy.

Value blast! Flexible adjustable phono stage with interchangeable tubes. Doesn't softer, but excites with a dynamic, punchy sound and great spatial representation.

If you want more, you have to spend a lot more.
