"The flexibility will significantly expand your musical horizons"

- The last session was especially impressive: every sound, every note – with **real emotions**, the sound as a whole is **really charged**. **Resolution is high** all over the entire range. Treble has an **airiness with lush overtones**.
- The speakers belted out **fast and clear beats** of a large drum. The bass is **perfectly contoured**. There is no low-frequency blur or artificial bloating.
- The sound has **contrast: saturated with detail** and a **tangible charge of energy**.
- Sound projects on a **large scale**, with **convincing dynamics**.
- The music has everything – **body, detail, volume with atmosphere, dynamics**, and thanks to a **fascinating lightness**, you can listen for long periods of time without the slightest fatigue.
- When listening to DSD files, the **sound completely detached** from the speakers, and hinted sound images became **more prominent and denser**.
- The ability to choose from **several sound options** is the strong point of the Pro-Ject bundle. You can choose the **most effective sound** for any source material and any genre, and **this flexibility** will significantly **expand your musical horizons**.
